

Stone Floor Shine

Protects the stone and provides a durable finish.

Purpose

Liberon Stone Floor Shine creates a protective coating and lasting shine on sealed terracotta and stone floors. Providing a durable finish it is ideal for floors in high traffic areas (i.e. kitchens, halls). Liberon Stone Floor shine is water based and is quick drying.

Performance

- Shines and protects terracotta and stone floors
- Ideal for rooms with high foot traffic
- Easy to use, no buffing required
- Quick drying
- For use with Liberon Stone Floor Sealer
- Endorsed by the Guild of Master Craftsmen
- Usage : Interior

How to Use

Preparation

Ensure the floor is clean by using Liberon Stone Floor Cleaner as required. Porous surfaces should be sealed first with Liberon Stone Floor Sealer.

Application

Dilute 3 parts Stone Floor Shine to 2 parts warm water. Apply a thin coat of Stone Floor Shine evenly over the whole surface using a mop or a sponge. Leave to dry for 30-60 minutes and the shine will appear. For a higher shine apply further coats.

Important

Do not use on unsealed floors, for best results use over Liberon Stone Floor Sealer. Always test product on a spare surface or inconspicuous area for colour compatibility and end result.

Cleaning and maintenance

Frequent maintenance may be carried out by re-applying a diluted solution of Stone Floor Shine (1 part Stone Floor Shine to 5 parts warm water). Use as often as required when the surface begins to look dry and dull. Re-application will depend upon usage. Floors treated with Stone Floor Shine should be cleaned with Liberon Stone Floor Cleaner.

Precautions

- Do not apply in thick coats as this may result in white marks which will have to be removed with Liberon Stone Floor Cleaner.
- Not suitable for waxed, synthetic or varnished floor surfaces.

Coverage: 1L = 15-20m² ½

Pack Size: 1L and 5L

Drying Time: 30-60 minutes
