

Natural Finish Varnish

Water based varnish which maintains the natural look and feel of the timber.

Purpose

Liberon Natural Finish Varnish is a tough, durable, non-yellowing, water based varnish that is especially suited for use on softwood such as pine. Keeping the natural feel and look of the timber Natural Finish Varnish uses a non-yellowing and quick drying formula that is water, heat and alcohol resistant.

Performance

- Maintains the natural feel and look of the timber
- Water based, low VOC
- Highly resistant to scratches and stains
- Non- yellowing and quick drying
- Ideal for soft and hard woods
- EN71 Part 3 Approved - Safe for toys
- Usage : Interior

How to Use

Preparation

Ensure the surface is sanded, clean, dry and free from dust or previous finishes. If you want to colour the wood you can apply Liberon Spirit Wood Dye or Liberon Palette Wood Dye to the timber before varnishing. Alternatively Liberon Palette Wood Dye may be added to the varnish to create unique colour tones. Add one 250 ml Liberon Wood Floor Dye to one 2.5 L tin of Natural Finish Varnish. Liberon Dyes are available in a range of wood shades.

Application

Apply the first coat of varnish using a Flat Lacquer Brush or an acrylic paint brush, brushing with the grain wherever possible. Allow to dry for a minimum of 30 minutes and sand lightly if required. Apply a second and third coat of varnish as above and allow to dry for a minimum of 8 hours before using the varnished surface. If being used as a sealer for Liberon Black Bison Wax Polish, apply one coat of varnish, allow to dry, then lightly sand and wipe off any dust before applying the wax.

Important

Always test product on a spare surface or inconspicuous area to check colour, compatibility and end result.

Precautions Allow wood dyes to dry for 24 hours before applying the varnish.

- Care must be taken on the application of the first coat of Natural Finish Varnish when being used over Liberon Palette Wood Dye. Keep brush strokes to a minimum as over brushing may lift out the colour.
- Do not exceed a 10% dilution of Natural Finish Varnish with Liberon Palette Wood Dye (250 ml Dye to 2.5 L Varnish).
- Natural Finish Varnish is not suitable for applying over an oil based sealer.
- For a more durable finish we recommend Liberon Palette Wood Dye is only added to the varnish for the first coat and that subsequent coats are varnish only
- Do not mix with solvent based dyes.

Colours: Clear Satin, Clear Matt

Coverage: 1L = 8-12m²

Pack Size: 250ml, 750ml, 2.5L

Drying Time: Minimum 30 minutes
